The U.S. lift Truck division situated in Cleveland has a expert team knowledgeable in Product Sales, Purchasing, Advertising, Logistical and Technical Support.

In the beginning the home-based forklift marketplace in Korea was an open import enterprise. Korea Machinery Co. Ltd. began in 1960, to import fully assembled forklifts as part of a domestic equipment expansion venture. Sales of these goods were originally targeted to state-run firms, large scale organizations, and the armed forces. This ultimately led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun trade operations throughout Korea to service and sell this heavy equipment. By 1978, a forklift manufacturing plant was successfully completed. Continuous technical training grew to become the new focus for improving quality and product development.

Home-based lift truck business for Daewoo started in 1967 and grew to an astonishing 90% market share in Korea. By the 1980's, Daewoo's advanced technological improvements combined with sales success placed them in a situation of substantial growth of their forklift operations.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a joint enterprise project to respond to competitive pressures in the US materials handling industry. This endeavor greatly expanded Daewoo's forklift sales. Construction was finished in 1984 to facilitate a new plant which helped launch the company for the manufacture of high end added-value products suited for export. In 1993, the company had a global sales network and started exporting models they had established through in-house technology, as an sovereign brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion possibilities into international markets.
